

Miconazole Shampoo

Davis Miconazole Shampoo contains powerful 2% Miconazole Nitrate which helps battle fungal conditions including those associated with yeast and ringworm. It aids in eliminating the scaling that is a by-product of seborrhea. The addition of 2% Colloidal Oatmeal locks in needed moisture while providing soothing relief. It is recommended that Davis Miconazole Shampoo can be mixed with Davis Chlorhexidine Shampoo to help relieve co-existing conditions caused by bacteria or other microorganisms.

Suggested Uses:

- Smelly, foul odor caused by yeast or fungi
- Helps eliminate scaling associated with seborrhea (Seborrhea is a condition in which flakes of dead skin are shed from the epidermis and hair follicles)
- Use in conjunction with Chlorhexidine whenever in doubt if skin issues are caused by bacteria

*A ready-to-use formula for dogs, cats, puppies and kittens.
Fragrance-free.*
