

Instructions For Using K-9 III

BLOWER – DRYER – FLUFFER

Connect service cord male plug to 20 amp outlet. Unit draws 17.5 amps in operation, more when starting, so be sure fuse is 20 amp rating, preferably fuse-tron type. Use 12/3 extension cords.

Turn on either switch, then second switch for maximum blow-power. Allow several minutes to obtain maximum heat. Less heat is obtained by using only one motor.

Be sure to brush or blow off dust accumulation on gray intake filters to insure full power at all times and long motor life. Allow hot unit to cool before storing. **Do not operate without filter!**

The use of goggles is recommended while operating this unit.

2 Motor Turbines 9 Amps each
60 Cycles AC 110-115 Volt
